

Amendment To The Claims

1-2. (Canceled)

3. (Currently amended) The accessory support of claim [[1, and]]  
4, further comprising a flange on the accessory support  
housing at an upper side extending toward the chair [[back]]  
backs and having an edge contoured to conform to chair-back  
contours of the chair backs when mounted on ~~side-by-side~~ the  
chair backs.

4. (Currently amended) An accessory support for positioning at  
the backs of a pair of side-by-side chairs, such chairs  
having chair backs and chair back brackets along sides of the  
chair backs that are attached to a standard when the chairs  
are side-by-side, the accessory support comprising a housing  
having receptacles for receiving accessories, and a  
substantially vertical, flat planar bracket wall extending  
substantially perpendicularly from the housing for placement  
between a pair of the chair backs for securing to the chair  
back brackets; wherein there are end supports protruding from  
the accessory support housing to engage surfaces of the chair  
backs along adjoining generally horizontal engagement  
surfaces and generally vertical engagement surfaces, wherein  
the generally vertical engagement surfaces have a height  
substantially similar to a height of the accessory support,  
the end supports being spaced laterally from and on opposite  
sides of the vertical bracket wall; and wherein said end  
supports for engaging the surfaces of the chair backs  
comprise a separate end support member at each end of the  
accessory support housing, said generally vertical engagement  
surfaces being inclined toward the accessory support from a  
bottom plane to engage the chair backs that are inclined

rearwardly and upwardly while maintaining an upper surface of the accessory support generally horizontal, each of said end support members having at least two of said vertical engagement surfaces.

5. (Currently amended) The accessory support of claim [[1]] 4, wherein said accessory support housing has receptacles of size to receive books, memo pads, pencils or communion cups.
6. (Currently amended) The accessory support of claim [[1]] 4, the bracket wall comprising a bolt hole configured to receive a bolt secured through a corresponding bolt hole of the chair back bracket, the bracket wall further comprising a bolt slot, spaced apart from the bolt hole, the bolt slot configured to receive a second bolt secured through a corresponding bolt slot of the chair back bracket.
7. (Currently amended) The accessory support of claim [[1]] 4, wherein said accessory support housing comprises a main section protruding outwardly from the chair backs on which the accessory support housing is mounted, a wall on the side of the main section spaced from [[such]] the chair backs, and ends having rounded corner walls joining end walls of the main section, and ears protruding from the end walls of the main section to define the outer lateral side edges of the main section.
8. (Currently amended) A holder for books, pads, pens, pencils and the like attachable at ~~the backs of~~ a pair of chair backs of side-by-side chairs having side brackets for attachment to a standard having a support wall, the holder having a housing and a substantially vertical, flat planar bracket wall extending outwardly from the housing for placement between

and securing to the brackets of one of the chair backs and the support wall of a standard, the housing extending laterally of the bracket wall to engage the ~~surfaces of two adjacent~~ chair backs when the bracket wall is positioned on the support wall, the holder further comprising a plurality of end supports protruding from the housing, each of said end supports comprising at least two generally vertical engagement surfaces and at least one generally horizontal engagement surface adjoining the vertical engagement surfaces, whereby each of said generally vertical and generally horizontal engagement surfaces is configured to engage the chair backs.

9. (Currently amended) The holder of claim 8, ~~and a~~ further comprising a generally horizontal flange on the holder at an upper side thereof and having an edge contoured to abut said chair backs of said pair of side-by-side chairs, along a generally horizontal, extended portion of a concave recess formed by adjacent chair backs, said generally horizontal flange comprising said generally horizontal engagement surfaces of said end supports.
10. (Currently amended) ~~[[The]]~~ A holder for books, pads, pens, pencils and the like attachable at the backs of a pair of side-by-side chairs having side brackets for attachment to a standard having a support wall, the holder having a housing and a substantially vertical, flat planar bracket wall extending outwardly from the housing for placement between and securing to the brackets of one of the chair backs and the support wall of a standard, the housing extending laterally of the bracket wall to engage the surfaces of two adjacent chair backs when the bracket wall is positioned on the support wall, the holder of claim 8, further

characterized by a pair of end supports on ~~[[the]]~~ two opposite, lateral ends of the holder comprising a separate end support member at each of the two opposite, lateral ends of the ~~accessory-support~~ holder, the end support members having generally vertical walls that are inclined from a maximum width adjacent a lower edge of the holder to a minimum width adjacent a top of the holder.
